ADVANCES IN SECURITY SOLUTIONS

The vehicle video recorder, VVR, is a sophisticated device that is equipped with GPS tracking and G sensor shock detection. It records precisely on what happens on the road. The benefit of recording with a VVR is the powerful evidence may be used in traffic courts. The vehicle camera recorder can recover the accident scene and find out the causes of the accident for the insurance purpose.

# VEHICLE TRACKING MANAGEMENT SYSTEM

4 CH Vehicle Recording System / 3G Application Management System

Integrated GPS, GSM, GIS technology into Vehicle tracking management system. Through internet transmitted technology, It's easy to track vehicle and coordinate the fleet. Mobile DVR received GPS data, then transmitted it to server database through 3G network, customers can retrieve the vehicle position and route through GIS platform. Combine the vehicle tracking system and the video file, the coordinator can double check between vehicle driving route and driving video. It will reduce manpower cost and increase management efficiency.
